React JS

React To-Do List Challenge

{CODENATION}

The Challenge!

Your challenge is to create a **to-do list** using **React**. This challenge is designed to test your React skills in making components, **mapping** data out, managing your **state** and receiving **user input**.

Requirements

Your app must have more than **one component**.

Add items to the list.

Delete items from the list.

Check items as done.

Stretch Goals

Edit items.

Archive items from the main list to a secondary list.

React JS

Visually this project is completely down to your choice! So **get creative and look around at existing to-do list applications and designs.**

React JS

Some notes...

Create a new React project, and use GIT regularly to save your project to a new GitHub repository.

Don't forget to use the #junior-dev channel to showcase your work!
